

Patient: Nisha Patel, 38-year-old female

Admission Date: 2026-02-04

Principal Diagnosis: Acute gastroenteritis with dehydration

Progress Note: Assessment lists urinary tract infection after urine routine showed pyuria. This conflicts with the admission diagnosis and should be flagged rather than merged silently.

Secondary Diagnoses: Acute kidney injury, improved

Allergies: Unknown

Hospital Course: Patient presented with loose stools, vomiting, fever, and dysuria.

Initial creatinine was elevated and improved after IV fluids. Urine culture and sensitivity was sent; report awaited at discharge.

Admission Medications: Thyroxine 50MCG OD

Advice on Discharge:

TAB OFLOX TZ 1-0-1 5 DAYS

TAB LOPERAMIDE 2MG SOS 3 DAYS

TAB METRONIDAZOLE 400MG TDS 5 DAYS

Follow-up Instructions: Review immediately for fever, worsening loose stools, vomiting, fatigue, reduced urine output, or abdominal pain. Review urine culture when available.

Pending Results: Urine culture and sensitivity report awaited.

Discharge Condition: Stable at request discharge, but final discharge date was not documented in the source note.
